SEMINAR SERIES

in Clinical & Translational Research

Robert M. Starke, M.D.

Director of Neurovascular Research
Co-Director of Endovascular Neurosurgery JMH
Assistant Professor of Clinical Neurosurgery
Assistant Professor of Clinical Radiology
Miller School of Medicine

WHEN

Tuesday, Nov. 7
5 – 6 p.m.

WHERE

Don Soffer Clinical
Research Center
Room 705

Technology Developments in Cerebral Aneurysms

Dr. Robert M. Starke's laboratory research focuses on cerebral vascular pathophysiology including aneurysm, AVM, ICH, and ischemic stroke models. These avenues allow for the development of novel cellular, medical, radiographic, surgical, and endovascular techniques.

As the Director of Neurovascular Research, he helps run numerous clinical trials for minimally invasive treatment of cerebral vascular disease brain tumors. He is one of the few dual-trained neurosurgeons in the country able to offer both surgical and minimally invasive endovascular solutions to complex cerebrovascular disease.
