

What is Translational Research?

Definition	Description	A few examples...
<p>T0: Basic Research (not translational)</p> <p>↕</p>	Basic Science Discovery & Lab Research	
<p>T1: Translation to Humans</p> <p>↕</p>	Testing basic science discoveries for clinical effect and/or applicability	<ul style="list-style-type: none"> • Preclinical & Animal Studies <ul style="list-style-type: none"> • Human Physiology • First in Humans • Proof of Concept • Phase 1 Clinical Trials
<p>T2 : Translation to Patients</p> <p>↕</p>	Testing new interventions in human subjects under controlled environments to form the basis for clinical applications and evidence-based guidelines	<ul style="list-style-type: none"> • Phase 2 Clinical Trials • Phase 3 Clinical Trials
<p>T3: Translation to Practice</p> <p>↕</p>	Research on the application of new interventions or therapies in general practice; research that yields knowledge on best ways to implement new medical interventions in the clinic	<ul style="list-style-type: none"> • Phase 4 Clinical Trials • Health Services Research <ul style="list-style-type: none"> -Dissemination -Communication -Implementation • Clinical Outcomes Research
<p>T4: Translation to Population Health</p> <p>↕</p>	Investigations of factors and/or interventions that influence the health of populations; ultimately results in improved health of the public	<ul style="list-style-type: none"> • Population-level Outcome Studies • Social Determinants of Health Policies

THE ULTIMATE GOAL of Translational Research is
POPULATION HEALTH
